

Notifications Module

This document describes how TaskTrail sends notifications and what the QA team must test. The QA owner of this module is Meera Iyer and the automation owner is Sara Khan.

Notification types

TaskTrail sends three kinds of notifications: push notifications, in-app notifications and a daily email digest. Push notifications are sent for new task assignments, due-date reminders and task reopen events.

Delivery time

A push notification must be delivered within 30 seconds of the event on a device that is online.

Quiet hours

Quiet hours are from 10 PM to 7 AM in the user's local time. During quiet hours push notifications are not shown; they are held and delivered together at 7 AM. In-app notifications are still stored and appear when the user opens the app. Users can switch quiet hours off in Settings, Notifications.

Email digest

The email digest is sent every day at 8 AM in the organisation's time zone. It lists overdue tasks and tasks due today. Users with no such tasks do not receive a digest.

Badge count

The app icon badge shows the number of unread notifications. Above 99 the badge shows "99+".

Known issues

ID	Problem	Status
TT-2302	Duplicate push on Android 13 when the app was force-closed	Open, High
TT-2310	Badge count not cleared after reading on iPad	Fixed in 4.8.1

Key test areas

Delivery within 30 seconds; quiet hours start and end; held notifications at 7 AM; digest content and timing; badge count above 99; notification permission denied.
